

10 Benefits of our Wastewater Installations for Home Owners

Mobility

OMCE can facilitate any site by designing an appropriate treatment system for that specific site while meeting the wastewater treatment requirements.

Certification

The design and installation of the treatment units are certified by fully qualified and experienced civil engineers, thus OMCE take sole responsibility of the systems operation. All certification is accompanied by photographic evidence of the installation at all critical stages.

Cost/Benefit

Installing a wastewater treatment system properly followed by certification and detailed photographic evidence will save the client from hassle and extra cost which may arise in the future as a result of upgrades in standards/legislation

Quality Control

OMCE have a dedicated plant section which specialise in the correct installation of wastewater treatment systems.

Health and Safety

OMCE is C2 registered and can provide full documentation to the Health and Safety Authority as regards workers, safety equipment etc.

Peace of Mind

Clients can rest assured the proprietary treatment unit will be installed properly and any risk of wastewater leakages or ponding are eradicated, thus reducing any health risks to the client or his/her family.

Efficient Service

OMCE will provide a quotation within 2 working days of receipt of detailed information, and upon confirmation complete the installation of the proprietary treatment unit within two working weeks.

Customer Care

OMCE ensure the design and installation are to the satisfaction of the customer, with a guaranteed after sales service.

Compliance

Wastewater treatment systems installed by OMCE comply with all relevant authorities such as the Environmental Protection Agency (EPA).

Licensed Installer

OMCE are fully certified as licensed installers by a series of wastewater treatment system producers and providers.
